FATTENING AND SLAUGHTER CATTLE

Beef cattle

Harvest offers a range of different beef cattle breeds for profitable fattening and slaughtering, taking into account geographic location, diverse climatic conditions, and natural environment. Three categories can be distinguished among most popular breeds.

- Beef cattle that tend to intensive weight gain, from calving to slaughter the bulls quickly reach the required condition, i.e. Aberdeen-Angus, Hereford, etc. have more juicy and fatty meat.
- Beef cattle that tend to gain weight slower and are suitable for grazing hence with minimal feeding costs. The bulls reach the required weight condition at about 1.5 - 2.0 years of age. This meat is leaner, with different stages of marbling, i.e. Charolais
- Crossbreed beef cattle resulting from crossing domestic and wild breeds, which have a good tendency to early maturation and are generally better adapted to a hot climate.

Austria

Thousands of years ago the husbandry of cattle began to spread out from the areas of its origin, moving across Eurasia and Africa. The industrial revolution around the turn of the 18th-19th centuries provided the stimulus for the development of specialized dairy, beef, and dual-purpose breeds.

The Dutch-Friesian became the dairy breed for West and Northeast Europe, Brown Swiss and Simmental became the breeds for Central and Eastern Europe, Scottish Ayrshire has spread in Scandinavia.

In the 20th century, several main breeds of cattle have become widely spread worldwide due to their economic efficiency in agricultural production systems.

Selective breeding and establishment of herd-books enabled the development of modern breeding cattle industry including reliable centralized information systems based on unique animal identification systems as well as productivity-based genetic information recording and processing organizations.

Nowadays, most countries worldwide have different frameworks for breed registry of animals, whereas some are government-based and others rely on private sector developed systems.

At Harvest, we continuously maintain cooperation with all the breeding industry partners and through our global network of farms and export facilities, we meet the demands of modern foreign markets.

DEHYDRATED FORAGES

BALES – PELLETS

ANALYTICAL DATA SHEET

Origin	Italy, Spain, France
Protein	From 12% to 22%
Moisture	Max. 12%
ADF	About 30-34%
NDF	42%
Period of Production	May-October
Packaging	Small Bale (30-40 Kg) tied with plastic strips Medium Bale (400-500 Kg) tied with iron wire Big Bale (780 Kg) tied with iron wire

SUITABLE FOR:

Alfalfa is an excellent forage plant that provides high levels of quality protein, minerals and vitamins. Its energy value is also very high due to the nitrogen value of forage. It is also a source of minerals such as calcium, phosphorus, potassium, magnesium, sulphur, etc.

The alfalfa, once collected from the fields, is mechanically conditioned and is dried by forced air. Dehydrated alfalfa increases the quality of the forage, economizes transport and storage; preserving intact its nutritional characteristics.

Dehydrated Alfalfa Bales

ANALYTICAL DATA SHEET

Origin	Italy, Spain, France
Size of Pellet	From 5 mm to 22 mm
Moisture	Max. 12%
Protein	From 12% to 22%
ADF	About 30-34%
NDF	42%
Period of Production	May - October
Packaging	Bags 25 Kg, 500 Kg, 1.2 Mt
Shipping	In bulk on 40ft container

Dehydrated Alfalfa Pellets

Alfalfa and dehydrated forage, as well as in pellets, is advantageous for camels, sheep, 5 and 6 mm.
Advantages over the bale format:

- Improved feed utilization by the animals.
- Different possibilities for protein presentation.
- Reduced transport cost. pigs, goats, rabbits, etc. We offer a pellet with diameters ranging between

PREMIUM QUALITY INDIAN RICE

Harvest Indian Rice

It has been reported that there are 100,000 varieties of rice, in India.

Harvest operators in three types of rice:
Basmati rice
Non-Basmati rice
Brown Rice

Harvest Basmati Rice

Basmati rice means the "queen of fragrance or the perfumed one." This type of rice has been grown in the foothills of the Himalayas for thousands of years. Its perfumy, nut-like flavour and aroma can be attributed to the fact that the grain is aged to decrease its moisture content.

Basmati, long-grained rice with a fine texture is in fact that the grain is aged to decrease its moisture content.

Basmati, long-grained rice with a fine texture is the costliest rice in the world and has been favoured by emperors and praised by poets for hundreds of years.
